

Adrien Brault-Lesage

AI Product Engineer · from customer context to shipped UI, across the whole stack · LLMs in production since 2022, agents since 2024

Paris area, France · adrien.brault@gmail.com · github.com/adrienbrault · LinkedIn · Available September 2026

Software engineer since 2010, with 9 years building for US startups remotely from France, on daily overlap with US teams; the last four moved me from pure backend toward product. I dig into the customer's context to understand the why, then carry the solution to production: deepest on backend, databases, data processing and infra, and I ship the interface too. Agentic engineering is how I work daily, and I run local models on my Macs and servers for fun.

Experience

Sluicebox.ai · Founding Engineer

May 2024 - present · remote (US startup)

AI carbon intelligence for electronics (life cycle assessment automation). Python/FastAPI, TypeScript/React, PostgreSQL/pgvector, AWS/EKS/Terraform.

- **Joined the three founders as employee #4** on a prototype, a team of 10 today, shipping to Fortune 500 enterprise customers; shaped an operating model where engineers own product decisions, and kept architecture simple by default (monolith, boring tech).
- **Led technical topics and demos in customer calls**, and steered the design toward end-to-end transparency: from data intake through AI infills and agent steps to each LCA decision and calculation, everything stays traceable, something customers keep bringing up.
- **Built the core LCA data processing** (BOM ingestion, enrichment, emission modeling; FastAPI + Postgres/pgvector), with LLMs where they beat deterministic code: extraction from CAD/PDF/BOMs, infills and predictions, matching, search and supplier-engagement agents, each with its own evals. Customer LCA delivery went from a year-plus to weeks.
- **Built the cloud platform**, iterating from Render.com to autoscaled Kubernetes (EKS, Terraform) once scale and costs justified it: per-PR cloud environments, fast CI, Datadog/Sentry observability, same-day ship cycles behind feature flags.
- **Architected the secure multi-tenant system**; drove the infrastructure side of SOC 2 certification and customer security reviews.

Sourceability · R&D Software Engineer

Sep 2022 - Mar 2024 · remote (US)

Rejoined (after the 2017-2021 tenure below) for self-directed R&D: applying LLMs, from GPT-3.5 onwards, to hard electronics-data problems (RFQs, part numbers, taxonomies).

- **Took RFQ intake from problem to production**, solo: LLM extraction from email into the ERP, human-in-the-loop review; ~1h/day saved per salesperson.
- **Favorite problem: decoding manufacturer part numbers**: modeled the schemes, extracted them from datasheet PDFs with GPT-3.5-era LLMs + GPT-4-Vision, collapsing walls of MPN tables into ecommerce-style variant selection.
- **Built the Sourcengine browser extension** for Chrome/Edge (Plasmo/React/TypeScript).

Miralia (ex Golem.ai) · Principal Engineer

Jun 2021 - Sep 2022 · Paris, hybrid

- **AI document-analysis product (NLP)**: performance, observability, functional testing, CI/CD on the PHP/Symfony monolith; coached engineers through pairing and reviews; pushed the async collaboration that enabled full-remote hiring.

Sourceability · Lead Software Engineer

Aug 2017 - Jun 2021 · remote (US)

- **Tech lead for the Catalog**, the department's core data source behind Sourcengine (marketplace) and Datalynq (compliance intelligence): 10M price/availability updates per day (Symfony/PHP, PostgreSQL, RabbitMQ, Elasticsearch, Citus).
- **Designed the REST APIs** powering the storefront; integrated a 500GB third-party product dataset.
- **Built a web scraping microservice** handling 5M pages/day (Python/Scrapy); AWS/Terraform/Kubernetes work with SRE.

Earlier

2010 - 2017

- **LAShowroom.com** (2016-2017): checkout and search rewrites, Symfony, Elasticsearch. **Mave** (2015-2016): Symfony backend, React Native iOS app. **HauteLook / Nordstromrack.com** (Nordstrom, 2013-2015): built Nordstrom Rack search on Solr, a year of it on-site in Los Angeles. **Intenteev**, **Playsoft**, **Editions Eyrolles** (2010-2013).

Skills

AI/LLM: structured extraction, embeddings/RAG, evals, DSPy, agents; OpenAI in production, local models (llama.cpp, MLX, vLLM, Hermes).

Engineering: Python (FastAPI), TypeScript/React, PostgreSQL/pgvector, Elasticsearch, queues/data pipelines, AWS, Kubernetes/EKS, Terraform, CI/CD, observability, multi-tenant SaaS. Deep PHP/Symfony background (12 years, SensioLabs expert cert).

Open source · how I learn and share, since 2011

IntelliJ Symfony Plugin · created it, 8M+ downloads, since handed over.

dokuel (dokuel.com) · 1v1 sudoku duels, polished mobile and desktop UI.

gwen3.6-27b-rtx5090 · 27B tuned for concurrent agents on one RTX 5090, 200K context via KV offload to DRAM/NVMe.

geekmagic-hacs (391 stars) · Home Assistant integration for GeekMagic smart displays.

SUPINFO, MSc Computer Science (2009-2014, final year online while working) · French (native), English (fluent)
